Problem: the Internet today

Who owns your personal data?

hac habitasse

Public can't afford further delay on health tech, medical records integration

Why the JP Morgan Data Breach Is Like No Other

sit am

USNEWS The Illusion of Online Privacy

em ipsum dolor sit et lacin tibulum nisi in

The problems behind the problem

- 1. There is no universal identity for individuals (or companies) that works across applications
- 2. Security (encryption, permissioned access) is proprietary to sites and applications
- 3. Application owners control their users' data; it is not secure or portable outside the app

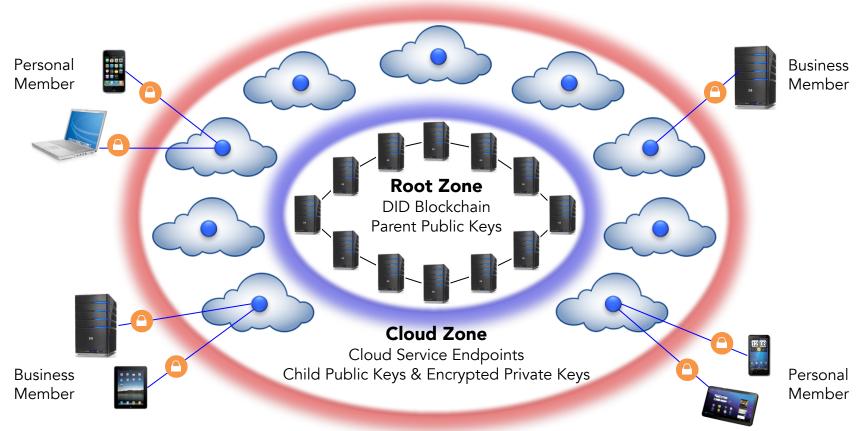

Solution: The Respect Network

- A new "web of trust" network that offers:
- Secure, private, and trusted communications
- √ 100% member control of all data—for life
- ✓ Revolutionary data exchange technology

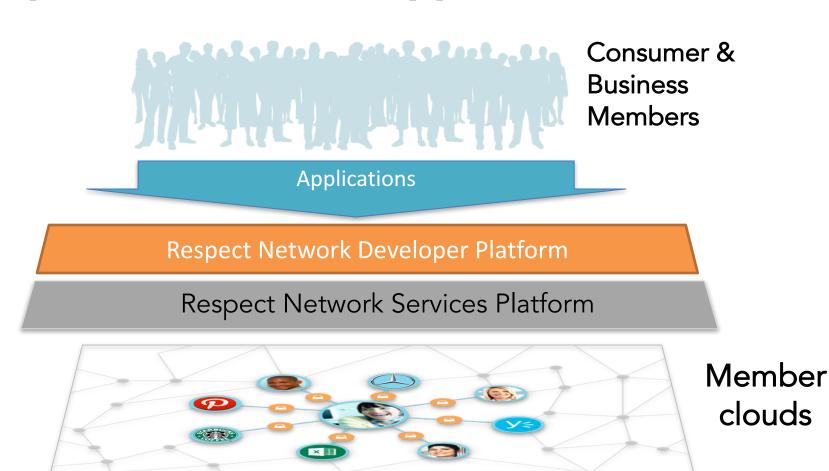

Decentralized Public Key Infrastructure

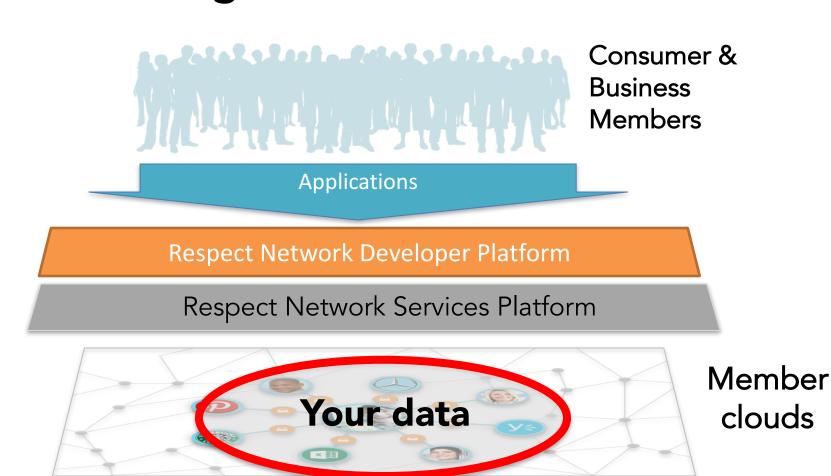

Edge Zone

Local Devices/Firewalled Servers Parent and Child Private Keys

A platform for new applications

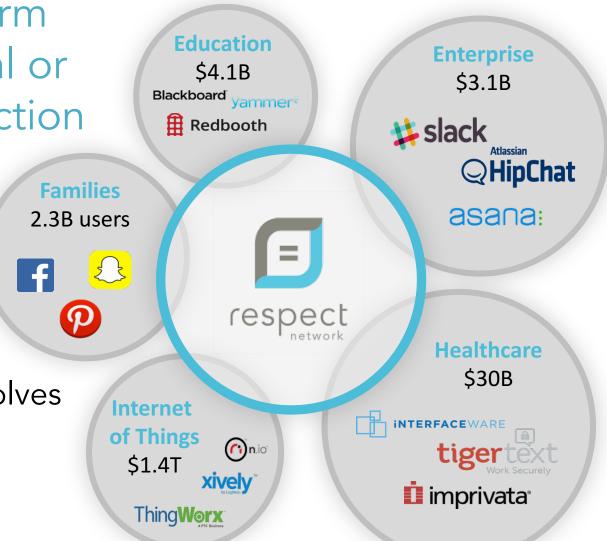

Data sharing like never before

Every app operates with the data in your cloud

A secure platform for any personal or business interaction

Respect Network solves

- Security/privacy
- Interoperability
- Data control

Our first focus: secure sharing apps

Consumer & Business Members

Applications

Three apps under development

Respect Network Services Platform

Member clouds

- Store and manage your digital self
- Starts with social data;
 next is health records
- Enables the personal data economy
 - Uses Respect Network for permissioned sharing

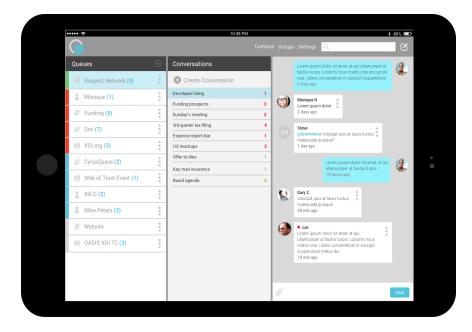

- Cyberspace with training wheels!
- Safe chat, email, browsing, and photo sharing with parental controls
- Uses the Respect Network for security and privacy

- Secure collaboration
- Cross-platform messaging that is simple, safe, and smart enough to use in every context
- Uses Respect Network for security, privacy, and collaboration semantics

Pipeline

CynjaSpace "Cyberspace with training wheels"

Live 3Q 2016

Digi.me "The Internet of me"

"Smart secure collaboration for everyone"

Coming

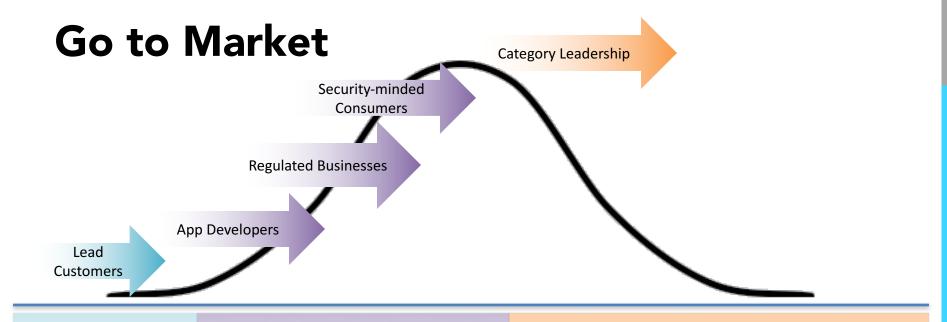

Market introduction

Top Customer Targets:

- 1. digi.me
- CynjaTech
- 3. BYU
- 4. Armor
- 5. Swedish

Market Growth

Major Initiatives

- Deploy digi.me
- Support CynjaSpace
- Deploy Queue

Measure of success

- 600,000 clouds
- 2 app developers
- 2 businesses

Timing:

12 months

) VV LI I

Major Initiatives

- App developer platform
- Queue for digi.me customers
- Secure messaging middleware

Measure of success

- 3,000,000 clouds
- 20 app developers
- 20 businesses

Timing:

• 24 months

Market Leadership

Major Initiatives

- EHR data exchange
- Medical device integration (IoT)
- Ethical Ad Network

Measure of success

- 15,000,000 clouds
- 190 app developers
- 40 businesses

Timing:

36 months

Revenue model

- ✓ Consumers get sponsored service
- ✓ Businesses get an engaged audience
- ✓ Virtually eliminates ad fraud

2016 Revenue and Expenses
